CSCI 2021, Spring 2015
Homework Assignment I

Problem 1:

In the following questions assume the variables `a` and `b` are signed integers and that the machine uses two's complement representation. Also assume that `MAX_INT` is the maximum integer, `MIN_INT` is the minimum integer, and `W` is one less than the word length (e.g., `W` = 31 for 32-bit integers).
Match each of the descriptions on the left with a line of code on the right (write in the letter). You will be given 2 points for each correct match.

1. One's complement of `a`

   _____

2. `a`.

   _____

3. `a & b`.

   _____

4. `a * 7`.

   _____

5. `a / 4` .

   _____

6. `(a < 0) ? 1 : -1` .

   _____

a. `~(~a | (b ^ (MIN_INT + MAX_INT)))`

b. `((a ^ b) & ~b) | (~(a ^ b) & b)`

c. `1 + (a << 3) + ~a`

d. `(a << 4) + (a << 2) + (a << 1)`

e. `((a < 0) ? (a + 3) : a) >> 2`

f. `a ^ (MIN_INT + MAX_INT)`

g. `~((a | (~a + 1)) >> W) & 1`

h. `~((a >> W) << 1)`

i. `a >> 2`

Problem 2:

We are running programs on a machine with the following characteristics:

- Values of type `int` are 32 bits. They are represented in two's complement, and they are right shifted arithmetically. Values of type `unsigned` are 32 bits.
- Values of type `float` are represented using the 32-bit IEEE floating point format, while values of type `double` use the 64-bit IEEE floating point format.

We generate arbitrary values `x`, `y`, and `z`, and convert them to other forms as follows:

```
/* Create some arbitrary values */
int x = random();
int y = random();
int z = random();
/* Convert to other forms */
unsigned ux = (unsigned) x;
unsigned uy = (unsigned) y;
double   dx = (double) x;
double   dy = (double) y;
double   dz = (double) z;
```

For each of the following C expressions, you are to indicate whether or not the expression *always* yields 1. If so, circle "Y". If not, circle "N". You will be graded on each problem as follows:

- If you circle no value, you get 0 points.
- If you circle the right value, you get 2 points.
- If you circle the wrong value, you get -1 points (so don't just guess wildly).

Expression	Always True?
`(x<y) == (-x>-y)`	Y N
`((x+y)<<4) + y-x == 17*y+15*x`	Y N
`~x+~y+1 == ~(x+y)`	Y N
`ux-uy == -(y-x)`	Y N
`(x >= 0) || (x < ux)`	Y N
`((x >> 1) << 1) <= x`	Y N
`(double)(float) x == (double) x`	Y N
`dx + dy == (double) (y+x)`	Y N
`dx + dy + dz == dz + dy + dx`	Y N
`dx * dy * dz == dz * dy * dx`	Y N

Problem 3:

Consider a **6-bit** two's complement representation. Fill in the empty boxes in the following table:

Number	Decimal Representation	Binary Representation
Zero	0	
n/a	-1	
n/a	5	
n/a	-10	
n/a		01 1010
n/a		10 0110
TMax		
TMin		
TMax+TMax		
TMin+TMin		
TMin+1		
TMin−1		
TMax+1		
−TMax		
−TMin		

Problem 4:
Textbook Question **2.86**

Problem 5:
Textbook Question **2.87**

Problem 6:
Textbook Question **2.89**

Problems 3 and 4 should be submitted for grading.
